Formation order and stability properties of orbits created in the Lorenz map are determined from the properties of corresponding orbits in an image map related to the Knife Map.

Return Map Approximations

The Rossler return map is well approximated by the following maps:

$$x' = \lambda x(1 - x)$$

$$x' = a - x^2$$

$$x' = 1 - \mu x^2$$

$$x' = 1 - \left| \frac{x - m}{w} \right|^2$$

Image of Lorenz Return Map

The image of the Lorenz return map is well approximated by the following maps:

$$y' = b - |y|^{1/2}$$

$$y' = 1 - \mu|y|^{1/2}$$

$$y' = 1 - \left| \frac{y - m}{w} \right|^{1/2}$$

Class of Lopsided Maps

$$x' = f(x; k, a) = 1 - \left| \frac{x - m}{w} \right|^k$$

- ➊ Zero crossings at $x = +1$ and $x = a$, $-1 \leq a \leq 0$
- ➋ Maximum at $m = \frac{1+a}{2}$
- ➌ Half-width $w = \frac{1-a}{2}$
- ➍ $m + w = 1$

Scaling

- Logistic: S-NB Period 3 = scaled version S-NB of M.
- Renormalization theory applies.
- U Sequence
- Knife: S-SNB Period 3 = scaled version S-SNB of K.
- Renormalization theory applies.
- U^{-1} Sequence

Topological Organization

The knife and logistic maps are suspensions of flows.
Corresponding orbits (identical names) in each suspension are organized identically.

Identical lifts of the logistic and knife maps lead to identical covering orbit organization.

The mysteries of orbit organization in flows with $g > 1$ are the same for stretch-and-fold and for tear-and-squeeze mechanics.
