

# Recitation 1

## Chapter 1

We'll start with some automatically numbered problems ...

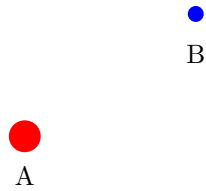

**Problem 1.** *A problem (a) with (b) parts.*

**Problem 2.** *What is 5 Hz times  $10^{-3}$  m?*

...and move on to an explicitly numbered problem.

**Problem 98.** *An apparently difficult problem.*

**Problem 101.** *The last problem: draw the direction of any forces.*

Note that the problem-separating space occurs after the nosolution section in nosolution mode.
